Newly Opened Homestead RV Community Selects Big Fish Technologies to Assist in Developing Next Level Technology within RV Community

FOR IMMEDIATE RELEASE

Bradenton, FL – January 4, 2021 - Big Fish Technologies (BFT) was selected by Ed Bridgman, owner - designer and developer of the newly opened Homestead RV Community located near Mobile, AL, to assist in building the most technologically advanced RV destination in the world. This newly designed community offers quick and easy access to information delivered at high speeds over the internet via state-of-the-art fiber optic cable through the entire community. Community wide high speed wireless connectivity is delivered to every site by wireless access points that are supplied with a fiber connection. This technology provides the fastest high-speed internet possible through the entire community guaranteeing that guests will be able to work or stream videos from their private hot tub, the community park or the privacy of their RV.

The new community has a clean uncluttered design, improved functionality and enhanced technology features focused on Bridgman's desire to provide a community that will set the bar for RV communities worldwide. He is passionate about not only designing and developing a community that will reduce costs and improve profitability but also sharing the concept with other property owners and realtors that are looking at ways to utilize and make their properties more profitable. According to Bridgman, "I want to use the Homestead RV Community as a flagship or calling card for demonstrating to others what can be done with their properties, I maximize the value of my client's property." He plans to do exactly that by sharing profitability results and feasibility analysis that will show precisely how his community can be duplicated by others. Visit their website at www.homervc.com and www.oeb.name to explore the vast range of amenities they are offering to create a safe, fun and friendly environment for all.

Big Fish has also installed a robust entertainment system for the pavilion powered by a 4500-watt amplifier for massive amounts of sound. The system includes a Roku for streaming movies for guests to enjoy the community and relationship aspect during their visit. The community is designed to accommodate both longer term guests and those wanting to visit for shorter stays as well. Added safety measures has also been provided by Big Fish including LPR (license plate recognition) cameras installed to capture pictures of every license plate exiting the community. Many other BFT surveillance cameras have been installed for monitoring all commons areas within the community as well to help provide a safe environment for all to enjoy their visits.
